

CHINA'S ENVIRONMENTAL CHALLENGES:

Summer Undergraduate Research Assistantships in China

The Harvard-China Project will provide generous financial support for **six Harvard undergraduates to spend the summer in China conducting research on China's energy and environmental future** under the guidance of an English-speaking professor at a leading university, from June 15 to August 16, 2018.

Topics—ranging from groundwater contamination and carbon trading, to algal-based carbon capture technology—can be found on the China Project website.

Application Deadline: Wednesday, February 28, 2018

Eligibility

All current Harvard undergraduate students are eligible to apply; however, priority will be given to rising juniors and seniors. Concentrators in ESPP, EPS, ESE, other sciences and engineering, and Economics will have an advantage, but we welcome applications from all concentrations.

Financial Support

All accepted students will receive generous financial support covering airfare, accommodations, and a nominal stipend. Summer savings will be covered. Made possible by a grant from the **Harvard Global Institute** on the theme of **'China 2030/2050: Energy and Environmental Challenges for the Future.'**
